REACHING THE TOP

Playground
Equipment

About Climbinet™

Climbinet has over 15 years experience building safe, accessible, and high-quality playground equipment. As a manufacturer and a division of Elephant®Play Inc., Climbinet sees its greatest mission in creating unique and economical playground equipment without compromising on safety and fun. The company's diverse play structures promote key elements of child development by encouraging active play, igniting personal challenges, and stimulating teamwork. Learning to play together with other kids on Climbinet playground equipment helps build crucial social skills from an early age.

Climbinet's *Reaching the Top!* philosophy encourages kids to meet their potential not just on the playground, but also in life. *Reaching the Top!* promotes accomplishment in a group dynamic, and the exhilaration of achieving mutual goals. Working together to reach the top of a Mast Net, shooting hoops with a friend on the Basketball Nets, or defending the fortress of a Climbing Net all encourage kids to develop important communication skills. An emphasis on *Reaching the Top!* and active play provides challenging fun for everyone.

Our Steel-Enforced Web Rope

Climbinet sets a higher industry standard. While most playground equipment manufacturers rely mainly on nylon core ropes, Climbinet's play structures are built **exclusively with steel-enforced web ropes**. By boosting bounciness and play value, Climbinet now offers one of the **strongest, safest, and most durable** products in the industry.

Nylon-core rope (A) vs. steel-core rope (B)

Nylon-core rope (A) stretches out quickly and loses its bounciness, requiring constant tightening. Climbinet's steel-core ropes (B) ensure cables stay taut longer, reducing **maintenance time and cost** and **increasing play value**.

A steel-core rope cutaway attached to a seat accessory

By using only a steel core, Climbinet's web rope **offers four times the capacity load** of nylon-core rope, which means ropes won't stretch or sag, causing premature wear. This is also essential to maintain the durability of seat accessories, where kids apply concentrated weight.

The 20 mm diameter steel-core cable provides better protection from vandalism, and better safety for children.

While most companies use 16 mm diameter cable, Climbinet's distinctive **20 mm diameter cable** allows for a more **comfortable and accessible grip**, as well as **safer fall protection**.

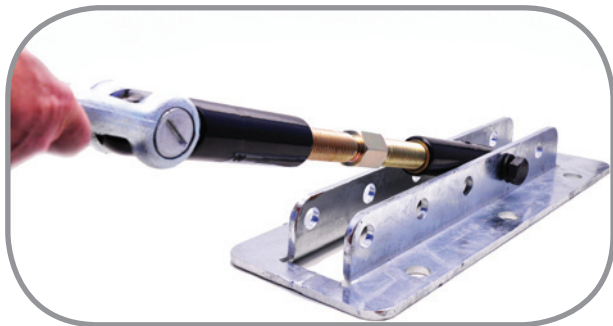

One-Piece Connector Joint

Climbinet products use a specially designed connector joint with no splice: a **safer and more robust** alternative.

Since its design **protects against constant fracture** in the connector joint, Climbinet ensures both web ropes and connector joints **prevent wear and tear** and are **built to last**.

Other Features

A unique, plastic covered turnbuckle fitted with **self-locking and counter nuts** keeps ropes taut without sacrificing range of motion, which **reduces maintenance** and **enhances play time**.

All of Climbinet's products are backed by its **industry-leading warranty**. See page 23 or visit www.climbinet.com for further details.

Climbing Nets

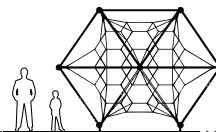

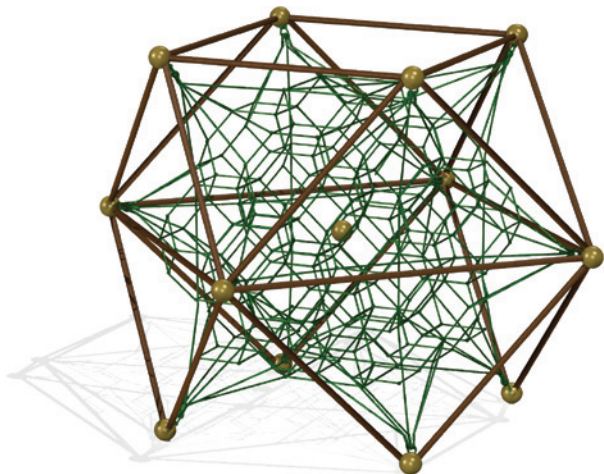

Swing through the jungle or protect your castle from invading forces with the safe and versatile Climbing Nets. Their unique design allows kids to use their imagination and create a whole world inside a durable steel frame. The Climbing Net is the rare outdoor playground equipment that thinks both inside and outside the box.

Best Suited For:

- **Space Economy:** Efficient design means a Climbing Net takes up less surface area than other models, so it can be the main attraction of a small playground or a perfect compliment on a larger one
- **Promoting Physical Development:** The Climbing Net's simple yet intricate 3D design allows kids to work on their balance and coordination while climbing up, down, and sideways
- **Emphasizing Social Play:** With enough capacity to support up to 49 kids, Climbing Nets are a great structure to play and learn together with familiar friends and new faces

Mast Nets

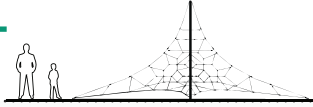

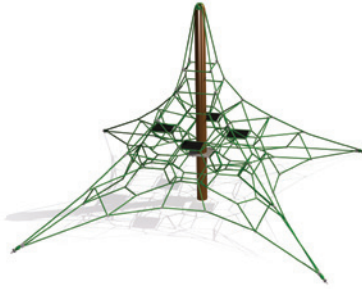

The most popular product line, Climbinet's Mast Nets capture the thrill of scaling the mast of a ship and watching the world go by from the crow's nest. With their shipmates all around them, kids will love the teamwork it takes to reach the top. With 20 different models available, you can be sure the bouncy and durable Mast Nets can be tailored to fit any school or park playground.

Best Suited For:

- **Extra Versatility:** The Mast Nets product family offers a range of products that can hold up to 220 kids, making it ideal equipment for any playground: smaller models can help create a more diverse and accessible park for any group of kids, and our larger models can be a centerpiece to model a whole playground after
- **Promoting Challenges:** Climbinet's *Reaching the Top!* philosophy is built around the Mast Nets, where fun takes on a different level as kids use teamwork and cooperation to climb to the peak
- **Customizable Budgets:** Climbinet's wide range of Mast Nets and prices allow park and playground designers to fit one into any budget

Basketball Nets

Turn a concrete jungle into an exciting playground with this slam dunk product from Climbinet. Basketball Nets can keep kids on the court with double, triple, or even quadruple the capacity of a regular basketball court. Creating an accessible environment not only boosts playgrounds' appeal, it can stimulate social and active play, which emphasizes healthy habits and key social skills for later in life.

Best Suited For:

- **Increasing Accessibility:** Instead of arguments over who gets the basketball hoop, create a playground where kids get to stay off the sidelines and play ball
- **Eliminating Dead Space:** Almost every playground has an empty concrete void where kids can have a tough time having fun. Buck the trend and make sure every part of the playground encourages play
- **Encouraging Healthy Play:** By encouraging kids to stay active on the court, they'll likely develop healthy exercise habits that will last off the court too

Safety

When it comes to designing playground equipment, Climbinet is first and foremost committed to the fundamentals of safety, by ensuring that every one of its playground structures adheres to ASTM & CSA standard requirements. Refusing to compromise, Climbinet strives to go above and beyond its own rigorous standards to ensure children are always protected against injury.

A feature key of Climbinet structures is its Freefall Prevention system. With a narrow width between ropes, children cannot fall directly to the ground since they are always held up by a supportive net layer. Should a child fall inside the play structure, he or she will be caught by an intermediate net below. Furthermore, the dimensions of the Mast Nets' widening base ensure that a falling child will be effectively caught by the exterior structure. At all times, the child must employ either two hands and one foot, or one hand and two feet. Thus, Climbinet playground equipment ensures that children always feel safe and stable as they play. Visit www.climbinet.com to learn more about the Freefall Prevention system.

Warranty

Climbinet is dedicated to standing behind its products and therefore offers an industry-leading warranty. Visit www.climbinet.com to learn more about the guarantees of your specific product.
